PDF Explainer

A sample document for testing translation and AI explanations

1 Scope

This document describes the reference behaviour of the PDF Explainer extension. It exists only so that the viewer, the translation popup and the AI sidebar can be exercised with real, selectable text.

The extension opens every PDF in a bundled PDF.js viewer. When the reader selects a passage and presses the configured shortcut, the selection is either translated by Google Translate or handed to a large language model for an explanation.

2 Normative references

Les documents suivants sont indispensables pour l'application du présent document. Pour les références datées, seule l'édition citée s'applique. Pour les références non datées, la dernière édition du document de référence s'applique.

3 Terms and definitions

3.1 selection — the range of text or the rectangular region of a page that the reader has highlighted before invoking an action.

3.2 explanation — a short, plain-language account of what a passage means, including the sense of any specialised terminology it uses.

4 Conformance

An implementation conforms to this document if it satisfies every requirement stated in the following clauses. Conformance is assessed against the observable behaviour of the viewer, not against its internal design.

The key words "shall", "should" and "may" are to be interpreted as described in the editorial rules of the directives. A conforming implementation shall not alter the contents of the document it renders.

5 Environment

The viewer is expected to run in a browser tab with a viewport of at least 1024 CSS pixels. Network access is required for the translation service and for the language model endpoint.

All rendering happens locally. The only data leaving the machine are the passages or regions that the reader explicitly submits, together with the configured credentials of the language model provider.

6 Language

Documents written in a language the reader does not speak are the primary use case. Selecting a sentence and pressing the translation shortcut shows a compact card with the translated text; pressing the explanation shortcut instead opens a sidebar that discusses the passage.
